Guidelines for preparing Assignments:

Students are instructed to prepare and submit the assignment by following the guidelines given below:

1. **Soft Copy:** Prepare the assignment in digital format (soft copy) and ensure that the document is properly formatted.
2. **Program Implementation:** Every task/question in the assignment must include a relevant program demonstrating its implementation.
3. **GitHub Submission:** Upload all the corresponding program files and their respective outputs to GitHub. Ensure that the repository is properly organised and accessible for evaluation.
4. **Font and Formatting:**
    - Font: Times New Roman
    - Font Size: 12 pt
    - All titles and headings must be in **bold**.
    - Maintain consistent formatting throughout the document.
5. **Figures and Tables:**
    - All figures and tables must have appropriate captions.
    - Provide sequential numbering for figures and tables (e.g., Figure 1, Figure 2; Table 1, Table 2).
    - Ensure that each figure and table is clearly labelled and referred to in the assignment wherever necessary.
6. **Program Output:** Include the relevant program outputs in the assignment document and upload the corresponding output files or screenshots to GitHub.
7. **Final Verification:** Before submission, verify that all tasks are completed, programs execute successfully, outputs are included, and the GitHub repository link is provided.

Evidence Rule Common to All Assignments

Every implemented task must be supported by: **Source Code → Test Input → Expected Behaviour → Actual Output → Performance Metrics (table/graph over at least three input sizes or seeds) → Interpretation.** A screenshot showing only a final answer is not sufficient. Operation counts and task metrics are primary evidence; execution time is secondary. Wherever a task says *Predict*, the prediction must be written before the experiment is run.

Programming language: Python 3 (Jupyter / Colab).
